Job description
What you will do
● You will be joining our product development team to build a Fintech platform that provides easy and intuitive access to financial service to millions of small investors in Vietnam.
● Your day to day tasks will include, but not be limited to, the following:
● Design, develop, maintain and optimise the Fintech platform – including RESTful APIs, our micro-service system, Data Warehouse, and the infrastructure behind them.
● Brainstorm, design, and develop our software products – including our online platforms, databases, server side applications, client side applications.
● Build, optimise and maintain high scalability and high availability systems that serve up to millions of users.
● Collect, process, store and analyse our ever-growing customer and financial data.
● Constantly improve and optimise our code to achieve our ambitious growth target. This will require both imagination and data-driven thinking – it's an unique job that is at the crossroad of art and science.
● Be pro-actively involved in the full Agile/Lean product development life cycle – that includes carrying out experiments, analysing data and collecting valuable user feedbacks, making improvements – rinse and repeat until the users are 100% satisfied. It will be a very different experience from working in regular outsourcing projects, and you will love it.
Requirements
What you are good at
● You must be an expert in Object-Oriented Programming, while also having some experience in Functional Programming.
● You must be highly proficient in Java programming language and the Spring / Spring MVC framework.
● Additionally, knowing these languages is a big advantage: Javascript / NodeJS, Python, Scala, Go.
● You should be experienced in building well-designed RESTful web services.
● You should be familiar with build and deploy automation tools such as Maven, Jenkins, Docker…
● You should have experience in Event Driven Programming and message queues based on ActiveMQ, RabbitMQ or Kafka, etc.

● You are familiar with concepts of Extreme Programming such as Test-Driven Development, Automated Test, Pair Programming.
● Having knowledge in the financial market, or a passion about investment will be a plus (but don't worry if you haven't, you can learn all about how to be a successful investor after joining us!)

Benefits

● Attractive income.
● Monthly/annual bonuses.
● Great working time, nearly 7hours per day Monday to Friday
● 12 days for annual leave and 03-day bonus leave for each 12 working months.
● Team building activities, holidays with the company.
● Open working space.
● Approach the environment of a fintech startup, grant admissions to many departments within the company: product-design, product development, growth, operations.
● Learn, experience, and get close contact with experts in investment and finance.
● Propose ideas freely, permission to make trials, and fail.
● Other benefits as per required from the Labor Code.
